Stroke, an infarct in the brain, is the 5th-leading cause of death in the US. An estimated 87% of strokes are ischemic in origin and result from occlusion of a cerebral artery by an embolus or thrombus. Hemorrhagic strokes are either intracerebral or subarachnoid and occur when blood from a ruptured vessel damages brain tissue.

Social Identity Threat and Caste Norms. Social identity effects are based on the protection of self-concepts (Tajfel and Turner, 1986) and thus any threat to this self-concept would be associated with strong identity effects. Research has shown that highly identified group members would find ways to protect their in-group identity (see Spears et al., 1997).
