Psychological trauma is damage to a person's mind as a result of one or more events that cause overwhelming amounts of stress that exceed the person's ability to cope or integrate the emotions involved, eventually leading to serious, long-term negative consequences. Trauma is not the same as mental distress or suffering, both of which are universal human experiences.

Risk factors of schizophrenia include multiple genetic and environmental phenomena. The prevailing model of schizophrenia is that of a neurodevelopmental disorder with no precise boundary, or single cause, and is thought to develop from very complex gene-environment interactions with involved vulnerability factors. The interactions of these risk factors are complicated, as numerous and ...
