Origin of Life - Loudoun County Public Schools

Since prehistoric times, people have pondered how life came to exist. This module describes investigations into the origins of life through history, including Louis Pasteur's experiments that disproved the long-held idea of spontaneous generation and and later research showing that the emergence of biological molecules from a nonliving environment – or abiogenesis – is not only possible, but likely under the right conditions.

Welcome to AP BIOLOGY!!!! NOTES: Chapter 1

Overview. Students explore the origin of life as they create coacervates, which provide evidence about how life may have formed on Earth. In the Guided Investigation, students follow a procedure to create coacervates, phospholipid vesicles similar to those created in the laboratory by Alexander Oparin in the 1920s as he investigated the origin of life.
