To find the y -intercept of the function, we can subtract the common difference from the first term of the sequence. Consider the following sequence. The common difference is d , so the sequence represents a linear function with a slope of d . To find the y -intercept, we subtract ad from a_1 . You can also find the y -intercept by graphing the function and determining where a line that connects the points would ...

Thales of Miletus (circa 625–547 BC) is known as the founder of geometry. The legend is that he calculated the height of the Great Pyramid of Giza in Egypt using the theory of similar triangles, which he developed by measuring the shadow of his staff. Based on proportions, this theory has applications in a number of areas, including fractal geometry, engineering, and architecture.
